

Typek

50% recycled

Why Typek Recycled?

Typek Recycled is a unique A4 copier paper manufactured by Sappi Fine Paper. It is the only office paper for all office equipment available in South Africa that has a 50% recycled content. It is also acid and lignin free.

What are the benefits of using recycled paper?

Most importantly, the use of recycled paper significantly reduces the amount of waste going into landfill sites. It also ensures that the use of wood fibre is maximised, as fibre can be recycled several times, maximising on its recyclability characteristics. Collecting waste also creates much needed work opportunities.

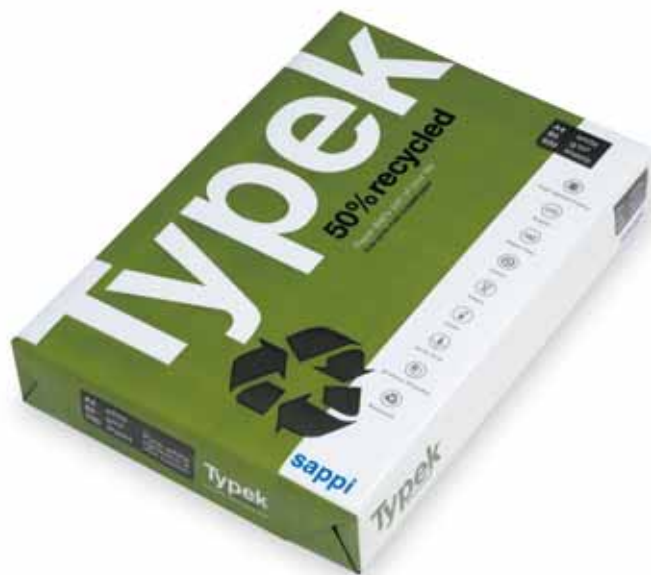

Does the recycled content of Typek Recycled compromise the quality of the paper?

From a technical and product performance/runnability point of view, **no compromises** are made in the manufacture of Typek Recycled, which is **as bright and as white** as ordinary office paper. It is made to ISO 9001:2000 certified procedures, carries the international paper permanence ISO 9706 and offers 150 CIE brightness. See the specification sheet enclosed.

Why should you be using Typek Recycled?

Typek Recycled is a general-use paper that will be used by government departments, schools, consumers, printers, manufacturers, corporations and businesses of all sizes.

Corporations and large companies, in particular, can now choose an environmentally-sound, locally-manufactured office paper to meet their office stationery requirements. Sappi feels this will be especially important to the companies listed on the JSE's Social Responsibility Investment (SRI) Index, as well as to other companies pursuing or already implementing sustainable development principles.
